bookmarks TDD

Hari Chauhan

Goal

Create an interactive, easy-to-navigate website for users to store bookmarks locally, without the need for a back-end server.

Desired Functionality

1. Add, edit and delete function.
2. Page numbering with 20 links on each page and buttons to change page.
3. Url validation
4. Ability to filter by tag (?)

Design

Urls are stored in a localStorage array. This gets updated through add/edit/delete functions.
